Treprostinil Injection is available only through select specialty pharmacy (SP) providers.

Follow these 5 simple steps to complete each section of the referral form.

1. Fill out the Patient Information (A and B). Let your patient know that an SP will be calling and it is important to answer or return the call.
2. Complete and sign the Prescriber Information, Prescription, and Statement of Medical Necessity (C through G).
4. Attach the clinical documents outlined on the fax cover sheet, including right heart catheterization, and echocardiogram results, and history and physical.
5. Use the fax cover sheet included in this PDF to fax the referral form and signed supporting documents to your preferred SP. NOTE: Insurance plans vary and may impact the approval process.

Information regarding the Centers for Medicare and Medicaid Services (CMS) established and expected coverage criteria for prostacyclin is included for your convenience.

MEDICARE COVERAGE CRITERIA FOR PROSTACYCLIN

The current Local Coverage Determination for Prostacyclin is as follows:

The pulmonary hypertension is not secondary to pulmonary venous hypertension (e.g., left sided atrial or ventricular disease, left sided valvular heart disease, etc.) or disorders of the respiratory system (e.g., chronic obstructive pulmonary disease, interstitial lung disease, obstructive sleep apnea or other sleep disordered breathing, alveolar hypoventilation disorders, etc.);

and

The patient has idiopathic/heritable pulmonary hypertension or pulmonary hypertension which is associated with one of the following conditions: connective tissue disease, thromboembolic disease of the pulmonary arteries, human immunodeficiency virus (HIV) infection, cirrhosis, diet drugs, congenital left to right shunts, etc. If these conditions are present, the following criteria must be met:

1. The pulmonary hypertension has progressed despite maximal medical and/or surgical treatment of the identified condition; and
2. The mean pulmonary artery pressure is greater than 25 mm Hg at rest or greater than 30 mm Hg with exertion; and
3. The patient has significant symptoms from the pulmonary hypertension (i.e., severe dyspnea on exertion, and either fatigability, angina, or syncope); and
4. Treatment with oral calcium channel blocking agents has been tried and failed or has been considered and ruled out.

Medicare coverage criteria provided for informational purposes only. Please check with the payer to verify billing requirements. RareGen and Sandoz do not make any representation or guarantees concerning reimbursement or coverage for any service or item.
Step 1: PATIENT INFORMATION

A: PATIENT INFORMATION

Name: First  Middle  Last

D: PRESCRIPTION INFORMATION

Sandoz® Treprostinil Injection vial
concentration

- 1 mg/mL (20-mL vial)
- 2.5 mg/mL (20-mL vial)
- 5 mg/mL (20-mL vial)
- 10 mg/mL (20-mL vial)

Diluent
(0.9% Sodium Chloride will be used if no box is checked)

- 0.9% Sodium Chloride for Injection
- Sandoz® Sterile Diluent for Treprostinil Injection
- Sterile Water for Injection
- Epoprostenol Sterile Diluent for Injection

Infusion route and pumps

- Subcutaneous continuous infusion with
  2 CADD-MS® 3 pumps
- Intravenous continuous infusion with
  2 CADD-MS® 3 pumps
  2 CADD-Legacy® pumps

Dosing and titration instructions

To specify initial dosing and titration instructions, fill in the blanks OR use the space below.

Patient dosing weight: _________ kg
Initiation dosage: _________ ng/kg/min

Titrate by _________ ng/kg/min every _________ days until goal of _________ ng/kg/min is achieved.

Indicate any alternative or additional titration instructions here:

Dispense 1 month of drug, needles, syringes, ancillary supplies, and medical equipment necessary to administer medication

x _______ refills.

E: PRESCRIPTION AND STATEMENT OF MEDICAL NECESSITY

I certify that the pulmonary arterial hypertension therapy ordered above is medically necessary and that I am personally supervising the care of this patient. (Prescribers should write “Brand Necessary” if Treprostinil Injection [Sandoz] is preferred.)

PRESCRIBER SIGNATURE REQUIRED TO VALIDATE PRESCRIPTIONS.

Prescriber signature

Dispense as written
Substitution permitted
Date

Prescriber attests that this is his/her legal signature.

NO STAMPS. PRESCRIPTIONS MUST BE FAXED.
Referral Form

Please complete, sign, and fax patient and provider information and prescription (steps 1–3), along with requested clinical documentation, to the SP using the enclosed Fax Cover Sheet.

Patient name

Date of birth / / 

F: NURSING ORDERS

Nurse visits
Please select an option:

☐ Specialty pharmacy home healthcare RN visit(s)
  to provide assessment and education on self-administration of Treprostinil Injection to include dose, titration, and side effect management.

OR

☐ Prescriber-directed SP home healthcare RN visit(s) as detailed below:

Location

☐ Home

☐ Outpatient clinic

☐ Hospital

Specify any over-the-counter or side effect management measures to be taken.

Site care

☐ Dressing change every ___________ days

☐ Per IV/SC standard of care

☐ Other:

The prescriber is to comply with their state-specific prescription requirements such as e-prescribing, state-specific prescription form, fax language, etc. Noncompliance of state-specific requirements could result in outreach to the prescriber.

I: TREATMENT HISTORY AND TRANSITION STATEMENT (continued)

Transition statement: It is necessary for this patient (if applicable) to transition FROM [ ] TO [ ].

Please provide justification for this transition.

J: CALCIUM CHANNEL BLOCKER STATEMENT

Please indicate whether the patient named above was trialed on a calcium channel blocker prior to the initiation of therapy and provide the results.

A calcium channel blocker was not trialed because

- [ ] Patient has depressed cardiac input
- [ ] Patient has systematic hypotension
- [ ] Patient has known hypersensitivity
- [ ] Patient is hemodynamically unstable or has a history of postural hypotension
- [ ] Patient did not meet ACCP Guidelines for Vasodilator Response
- [ ] Patient has documented brachycardia or second- or third-degree heartblock
- [ ] Other [ ]

The following calcium channel blocker was trialed

With the following response(s)

- [ ] Patient hypersensitive or allergic
- [ ] Adverse event
- [ ] Patient became hemodynamically unstable
- [ ] Pulmonary arterial pressure continued to rise
- [ ] Disease continued to progress, or patient remained symptomatic
- [ ] Other [ ]

Comments

**Step 5:**

- Completed Treprostinil Injection Referral Form, including
  - Step 1: Patient/Insurance Information
  - Step 2: Prescriber/Prescription Information
  - Step 3: Medical Information/Patient Evaluation
  - Step 4: Completed Fax Cover Sheet
- Signed and dated documents
  - Right heart catheterization results
  - Echocardiogram results
  - 6-minute walk test results
  - History and physical (including onset of symptoms, PAH clinical signs and symptoms, course of illness)
- Need for specific drug therapy
INDICATION

Treprostinil Injection is a prostacyclin vasodilator indicated for

• Treatment of pulmonary arterial hypertension (PAH), World Health Organization (WHO) Group 1, to diminish symptoms associated with exercise. Studies establishing effectiveness included patients with New York Heart Association (NYHA) Functional Class II-IV symptoms and etiologies of idiopathic or heritable PAH (58%), PAH associated with congenital systemic-to-pulmonary shunts (23%), or PAH associated with connective tissue diseases (19%).

• Patients who require transition from epoprostenol to reduce the rate of clinical deterioration. The risks and benefits of each drug should be carefully considered prior to transition.

IMPORTANT SAFETY INFORMATION

CONTRAINDICATIONS

None

WARNINGS AND PRECAUTIONS

• Chronic intravenous (IV) infusions delivered using an external infusion pump with an indwelling central venous catheter are associated with the risk of bloodstream infections (BSIs) and sepsis, which may be fatal. Therefore, continuous subcutaneous (SC) infusion is the preferred mode of administration.

• Do not abruptly lower the dose or withdraw dosing.

• Treprostinil Injection may cause symptomatic hypotension.

• Titrate slowly in patients with hepatic or renal insufficiency because such patients will likely be exposed to greater systemic concentrations relative to patients with normal hepatic or renal function.

• Treprostinil Injection inhibits platelet aggregation and increases the risk of bleeding.

ADVERSE REACTIONS

During clinical trials with SC infusion of treprostinil, infusion site pain and infusion site reaction (eg, erythema, induration, or rash) were the most common adverse events and occurred in majority of those treated with treprostinil. Infusion site reactions were sometimes severe and led to discontinuation of treatment. Rash and hypotension (14% and 4%, respectively) were also commonly reported with SC infusion of treprostinil. Other common adverse events (≥9% of patients in the treprostinil arm) included headache, diarrhea, jaw pain, edema, vasodilatation, and nausea, and these are generally considered to be related to the pharmacologic effects of treprostinil, whether administered subcutaneously or intravenously. The adverse reactions reported with treprostinil IV included bloodstream infections, arm swelling, parasthesias, hematoma, and pain.

DRUG INTERACTIONS

Treprostinil Injection dosage adjustment may be necessary if inhibitors or inducers of CYP2C8 are added or withdrawn.

USE IN SPECIFIC POPULATIONS

• Safety and effectiveness of Treprostinil Injection in pediatric patients have not been established.

• It is unknown if geriatric patients respond differently than younger patients. Caution should be used when selecting a dose for geriatric patients.

• There are no adequate and well-controlled studies with Treprostinil Injection in pregnant women.

• It is not known whether Treprostinil Injection is excreted in human milk.
